MODEL KY-19

NOTES

- The KY-19 is a 3-CCD color video camera that the optical system of the KY-27 color video camera is changed. Namely, the KY-27 employs the 2/3" CCD while the KY-19 employs the 1/2" CCD.
- Therefore, this service manual only describes the matters that are different from the KY-27.
- On servicing, refer to the service manuals (No. 60061 for NTSC and No. 60072 for NTSC/PAL) for the KY-27 together with this.
- The KY-19 is capacitated for incorporating all options for the KY-27 except the camera lens.

Important Safety Precautions

Prior to shipment from the factory, JVC products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

●Precautions during Servicing

1. Locations requiring special caution are denoted by labels and inscriptions on the cabinet, chassis and certain parts of the product. When performing service, be sure to read and comply with these and other cautionary notices appearing in the operation and service manuals.

2. Parts identified by the  symbol and shaded (■) parts are critical for safety.

Replace only with specified part numbers.

Note: Parts in this category also include those specified to comply with X-ray emission standards for products using cathode ray tubes and those specified for compliance with various regulations regarding spurious radiation emission.

3. Fuse replacement caution notice.

Caution for continued protection against fire hazard.

Replace only with same type and rated fuse(s) as specified.

4. Use specified internal wiring. Note especially:

- 1) Wires covered with PVC tubing
- 2) Double insulated wires
- 3) High voltage leads

5. Use specified insulating materials for hazardous live parts. Note especially:

- | | | |
|--------------------|--------------------------------------|------------|
| 1) Insulation Tape | 3) Spacers | 5) Barrier |
| 2) PVC tubing | 4) Insulation sheets for transistors | |

6. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap ends of wires securely about the terminals before soldering.

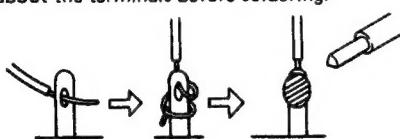

Fig. 1

7. Observe that wires do not contact heat producing parts (heat-sinks, oxide metal film resistors, fusible resistors, etc.)

8. Check that replaced wires do not contact sharp edged or pointed parts.

9. When a power cord has been replaced, check that 10–15 kg of force in any direction will not loosen it.

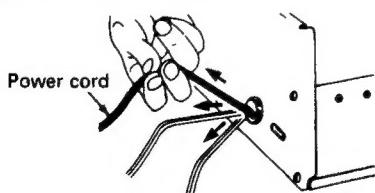

Fig. 2

10. Also check areas surrounding repaired locations.

11. Products using cathode ray tubes (CRTs)

In regard to such products, the cathode ray tubes themselves, the high voltage circuits, and related circuits are specified for compliance with recognized codes pertaining to X-ray emission. Consequently, when servicing these products, replace the cathode ray tubes and other parts with only the specified parts. Under no circumstances attempt to modify these circuits. Unauthorized modification can increase the high voltage value and cause X-ray emission from the cathode ray tube.

12. Crimp type wire connector

In such cases as when replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, if replacing the connectors is unavoidable, in order to prevent safety hazards, perform carefully and precisely according to the following steps.

1) Connector part number : E03830-001

2) Required tool : Connector crimping tool of the proper type which will not damage insulated parts.

3) Replacement procedure

(1) Remove the old connector by cutting the wires at a point close to the connector.

Important : Do not reuse a connector (discard it).

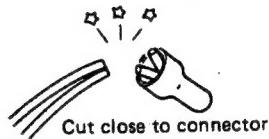

Fig. 3

(2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.

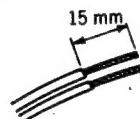

Fig. 4

(3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.

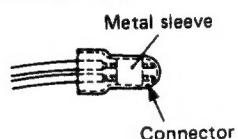

Fig. 5

(4) As shown in Fig. 6, use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

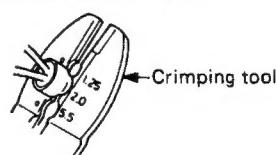

Fig. 6

(5) Check the four points noted in Fig. 7.

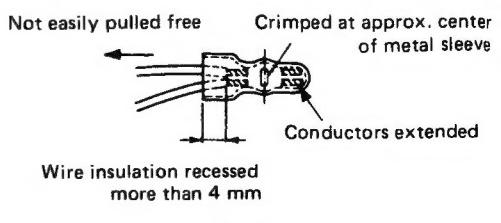

Fig. 7

● Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions. Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

1. Insulation resistance test

Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance (d), (d') between soldered terminals, and between terminals and surrounding metallic parts. See table 1 below.

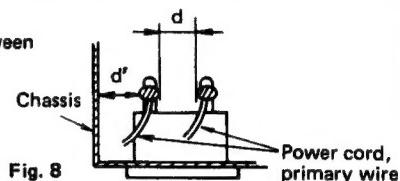

Fig. 8

4. Leakage current test

Confirm specified or lower leakage current between earth ground/power cord plug prongs and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

Measuring Method: (Power ON)

Insert load Z between earth ground/power cord plug prongs and externally exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See figure 9 and following table 2.

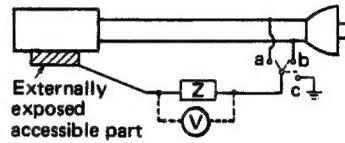

Fig. 9

5. Grounding (Class I model only)

Confirm specified or lower grounding impedance between earth pin in AC inlet and externally exposed accessible parts (Video in, Video out, Audio in, Audio out or Fixing screw etc.).

Measuring Method:

Connect milli ohm meter between earth pin in AC inlet and exposed accessible parts. See figure 10 and grounding specifications.

DIFFERENT POINTS BETWEEN KY-19 AND KY-27 IN THEIR INSTRUCTIONS

- Handling and operation methods of the KY-19 are the same as those of the KY-27 except the following points.

1. Standard camera lens

Since the KY-19 employs the 1/2" CCD, the optical system is different from that of the KY-27 that employs the 2/3" CCD. In those circumstances, camera lenses for the 2/3" CCD of the KY-27 cannot be used for the KY-19.

The standard camera lenses and others usable for the KY-19 are as follows.

- S14X7.5B12 : Standard camera lens for the KY-19, for 1/2" CCD, 14X zoom lens (made by Fujinon)
- YH13X7.5K12 : Standard camera lens for the GY-X2, for 1/2" CCD, 13X zoom lens (made by Canon)
- HZ-714 : Standard camera lens for the GY-X1, for 1/2" CCD, 14X zoom lens (made by JVC)
- S16X6.7B12 : for 1/2" CCD, 16X zoom lens (made by Fujinon)
- YH17X7KRS12: for 1/2" CCD, 17X zoom lens (made by Canon)

In addition, the HZ-410 and HZ-416 camera lenses for the KY-15 (1/2" CCD) cannot be used for the KY-19 since their optical characteristics don't match the KY-19.

2. Different matters in the specifications of KY-19 and KY-27

There are the following differences between the KY-19 and KY-27 in their specifications.

	KY-19	KY-27

DR2	CCD driver	
PA	Pre Amplifier	
PR1	Video processing	
CP1	CPU board	Board pattern is the same as that of the KY-27, but it differs from the KY-27's in the program ROM (IC2). (See Note.)

Note: The board assemblies other than the above ones are used in the KY-19 and KY-27 in common with the exception that some of those used in early products of the KY-27 are not interchangeable.

SECTION 2

SERVICE CAUTIONS AND DISASSEMBLY

Notes: • For disassembling methods and P. C. board arrangements of the KY-19, refer to the service manuals (No. 60061 and 60072) for the KY-27 since the two models are the same in those points.
 • In regard of the internal switch on the PR2 board, the KY-19 has the switch layout different from the KY-19 as shown below.

■ SCHEMATIC DIAGRAM NOTES

- Schematic safety precaution

 Parts are safety related parts.

When replacing them, be sure to use the specified parts.

Voltage and waveform measurements.

Voltage: Measured with digital voltmeter in DC range;
iris closed.

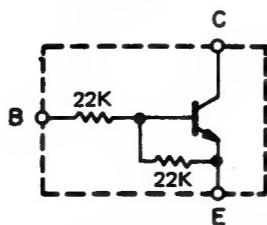

Waveform: Grey scale illuminated at more than 4000 lux
at 3200 K lighting.

- Terminal logic

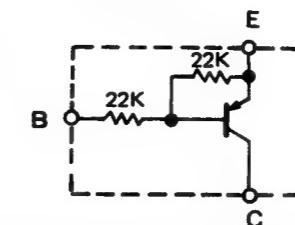

Top bar of terminal name show input or output logic.
Top bar shows, the control circuit become active at negative (low) logic input for example.

- Digital transistors

DTC124EU

DTA124EU

● Unless otherwise specified transistors and F.E.T.s are:

2SA1532

2SC3930

2SK662

2SJ84

● Definition of the (A) and the (B) or circuit boards diagrams

(A) : Side on which discrete parts are assembled
(B) : Side on which only chip parts are assembled.

■ REPLACING SUBMINIATURE "CHIP" PARTS

- Some resistors, shorting jumpers (0Ω resistance), ceramic capacitors, transistors, and diodes are chip parts. These chip parts cannot be reused after they are once removed.

- Chip resistors used in some circuits are of high precision type having little error in resistance.

To demonstrate the full capacity of this camera head, place an order for proper parts referring to the diagrams and parts lists in the sections 7.

- Soldering cautions:

- 1) Do not apply heat for more than 3 seconds.
- 2) Avoid using a rubbing stroke when soldering.
- 3) Discard removed chips; do not reuse them.
- 4) Supplementary cementing is not required.
- 5) Use care not to scratch or otherwise damage the chips.

- Resistors and capacitors are not interchangeable with chip parts which are used in the color video cameras BY-110, KY-210, etc., because of difference in size. In case of order for parts, refer to the section 7 "ELECTRICAL PARTS LIST".

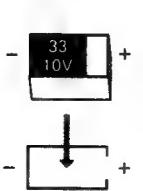

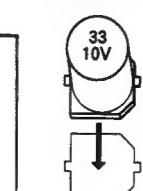

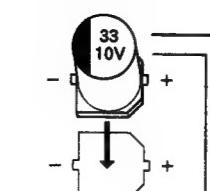

- Polarities of chip electrolytic capacitors and chip tantalum capacitors used in this model are as illustrated below.

Polarities indicated by silk-screen printing on P.C. boards are also shown below. When replacing such parts, make sure of polarities.

- Electrolytic capacitor

- Non-polarized electrolytic capacitor

- Tantalum capacitor

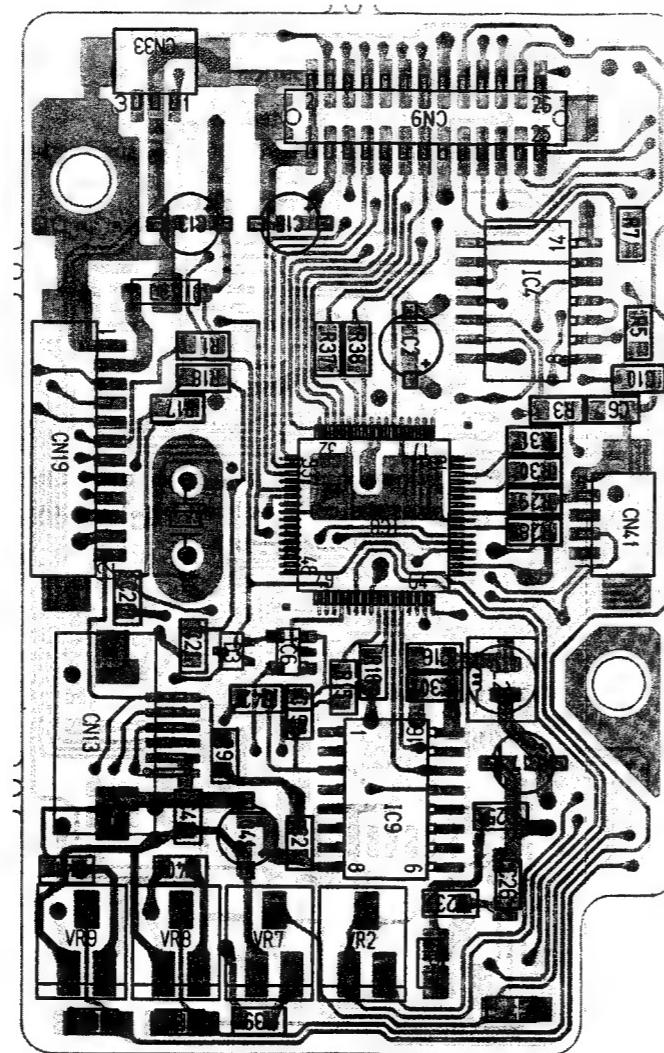

Capacitance (μF) Example: 33 μF

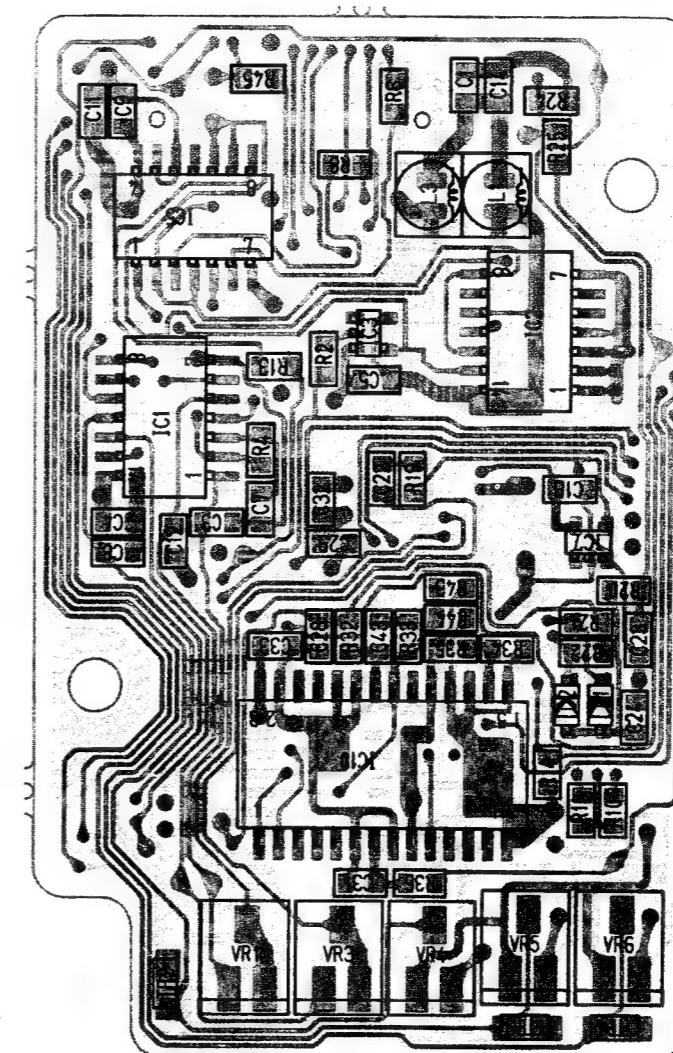

Dielectric strength (V) Example: 10 V

ELECTRICAL PARTS LIST

SAFETY PRECAUTION:

Parts identified by the Δ symbol are critical for safety. Replace only with specified parts numbers. For maximum reliability and performance, all other replacement parts should be identical to those specified.

NOTE:

- Parts not denoted by parts numbers are not supplied by JVC.
- Abbreviations in this list are as follows:

RESISTORS

In the "Description" column:

All resistance values are in ohms (Ω).
 K expresses kilo-ohm (1 000 ohms, $k\Omega$).
 M expresses mega-ohm (10^6 ohms, $M\Omega$).

In the "Parts Name" column:

COMP. RESISTOR	: Composition Resistor
U.F. RESISTOR	: Non-inflammable Resistor
O.M.F. RESISTOR	: Oxide Metalized Film Resistor
FUSI. RESISTOR	: Fusible Resistor
M.P. RESISTOR	: Metal Plate Resistor
M.G. RESISTOR	: Metal Graze Resistor
M.F. RESISTOR	: Metal Film Resistor
W.W. RESISTOR	: Wire Wound Resistor

CAPACITORS

In the "Description" column:

All capacitance values are in microfarad (μF) unless otherwise indicated.
 P expresses picofarad (10^{-12} farad, pF).

In the "Parts Name" column:

TRIM. CAPACITOR	: Trimmer Capacitor
CER. CAPACITOR	: Ceramic Capacitor
E. CAPACITOR	: Electrolytic Capacitor
TAN. CAPACITOR	: Tantalum Capacitor

NOTE

This section makes mention of the parts of only the following P.C. board assemblies that are different from those of the KY-27.

For the parts lists of P.C. board assemblies not appearing in this section, refer to the service manual for the KY-27 (Manual No. 60061 and No. 60072).

P.C. board assemblies appearing in this section

7.8	PR2* 08	7-10
7.9	CP1 11	7-13

*Nevertheless the same PR2 board is incorporated in the KY-19 and the KY-27 in common, the reason why the PR2 board assembly list appears in this section is as follows.

Late products of the KY-27 have drastic changes in the matrix circuit, and the PR2 board assembly parts of them and the KY-19 are considerably different from the parts list appearing in the KY-27's service manuals issued previously.
